

Fight against Occupational Cancer Conference - Workshop 1 -

Risk-based approaches as a basis for
transparency and socially accepted
measures for activities with
carcinogenic substances

Rüdiger Pipke
Federal Institute for Occupational Safety and Health (BAuA)

Welcome to Workshop 1

Short Presentations by

- **Andrea Kernmayer** (Department for Occupational Medicine and Occupational Psychology, Austrian Labour Ministry)
- **Matthieu Lassus** (French Labour Ministry)
- **Ilse v. d. Aker** (Dutch Ministry for Social Affairs and Occupation)

Some Questions to be discussed

- Which procedures and general principles are used to implement the (risk-based) limit values in socially accepted management concepts?
- Is there a need for an EU-harmonised risk (level) for activities with carcinogenic substances and are there possibilities for a way forward in the framework of existing regulation?
- What are realistic steps to initiate a corresponding process? What are inhibiting factors? Can these be eliminated?
